

Our packages targeted for each distro are best.

But if they don't work, or you have a distro we don't specifically support, then please try our ApplImage package.

Ubuntu, RedHat, Suse/OpenSuse, Debian, Fedora

Sky app can run simple standalone executable successfully with the following steps:

1. Download Sky ApplImage
2. In command line, cd to directory containing Sky ApplImage
3. Run: `$ chmod + x sky-latest-x86_64.ApplImage`
4. Run: `$/sky-latest-x86_64.ApplImage`

CentOS

(if FUSE is not available)

1. Download Sky ApplImage
2. In command line, cd to directory containing Sky ApplImage
3. Running as root
4. `$ mount -o loop sky-latest-x86_64.ApplImage /mnt/`
5. Exit from root
6. `$/mnt/AppRun`
